

JOSE ANTONIO MASSARO

Senior Full-Stack Engineer | Founding engineer to 100k+ users | TypeScript / React / NestJS / Node / Python | Ships agent-powered products end to end

New York, NY (available on-site) · jamassaro@gmail.com · (718) 300-3187 · github.com/jamassaro · jamassaro.github.io

SUMMARY

Founding engineer and full-stack builder. Co-founded an EdTech startup, raised \$600K at roughly a \$12M valuation, and took it 0 to 1 to 500+ schools and 100,000+ students across four countries as the hands-on technical lead, then shipped agent-powered products at Innovare, Glampi, and Avattar. Deep in TypeScript, React, Node, and Python, with production AI: MCP servers, agent orchestration, and RAG.

EXPERIENCE

Innovare

Sep 2025 - Jun 2026

Senior Full-Stack Engineer

Remote (NYC)

- Own the AI surface of a K-12 analytics platform end to end, from Postgres schema and API design through the React interface, serving Chicago public schools and schools of Illinois.
- Shipped an agentic feature set from scratch: task routing, tool use, and an MCP server that converts unstructured PDFs and images into structured records feeding downstream agents, and defined the interaction patterns for AI-generated cohorts, thresholds, and interventions where none existed.
- Re-architected the LLM layer from agents embedded in FastAPI services into a decoupled orchestrator on Google Agent Registry with centralized prompt management, so agents and prompts change without redeploying services.
- Built high-density React dashboards over datasets of hundreds of thousands of records, with virtualized tables, custom charts, and SSE real-time alerts, and cut one dashboard's load time from about 40s to 8s.
- Added self-healing load logic, frontend validation, and Sentry instrumentation that eliminated infinite-loading states and data inconsistencies, and led the move to modular services (Express, FastAPI, Redis/BullMQ, Docker) and a Bronze/Silver/Gold BigQuery pipeline.

Stack: React (JavaScript), Express, Python (FastAPI), PostgreSQL/pgvector, Redis/BullMQ, GCP (Vertex AI, Agent Registry, BigQuery), Terraform, Docker, Sentry, Auth0.

Glampi

Feb 2025 - Aug 2025

Lead Engineer (contract)

Remote

- Sole technical owner of a booking and operations SaaS built in TypeScript end to end: NestJS API, Next.js frontend, and PostgreSQL with Prisma, from data model to shipped UI.
- Worked directly with the founders and product team to scope releases and define technical strategy, shipping user-facing features that improved customer onboarding and booking by 40%.
- Shipped a natural-language search layer over bookings, availability, and customer data using OpenAI models, streamlining operations for the team.
- Stood up CI/CD on Docker and AWS CodePipeline for zero-downtime deploys, with secure auth and roles on AWS Cognito.

Stack: TypeScript, NestJS, Next.js, Prisma, PostgreSQL, AWS (ECS, RDS, Cognito), Docker, CI/CD.

Avattar Consulting

Nov 2023 - Aug 2025

Senior Frontend Engineer (contract)

Remote

- Led frontend for ASIA, a generative-AI platform (OpenAI and Gemini in production) that automates test-plan and user-story generation, cutting manual effort by 50%.
- Scoped and estimated 10+ client projects, defining scope and resource allocation and optimizing delivery timelines by 30%.
- Implemented automated testing strategies that cut post-release defects by 40% and sped deployment cycles by 20%.
- Ran functional testing across web and mobile applications, meeting 100% compliance with industry and security standards.

Stack: TypeScript/JavaScript (React), Java (Spring Boot), OpenAI, Gemini, PostgreSQL, AWS.

BRAVE UP!

Jul 2016 - Feb 2025

Co-Founder & Founding Engineer

Latin America & New York

- Founding engineer of a K-12 safety platform taken 0 to 1 to 500+ schools and 100,000+ students across four countries, still in use across Latin America today.

- Raised \$600K at roughly a \$12M valuation to fund the build and the multi-country rollout.
- Wrote both frontend and backend (React, Node/Express, Python on AWS Lambda), including the real-time bullying-incident detection pipeline and a predictive model that maps student relationship networks to flag at-risk students; feature work drove a 60% increase in platform adoption.
- Ran the product roadmap off school-administrator and teacher interviews and built per-region Spanish localization tooling, lifting user engagement 35% and retention 20%.
- Grew and ran a 4-team engineering org (frontend, backend, DevOps, support), moving releases from weekly to daily, improving development efficiency 30%, cutting bug reports 40%, and raising system performance 25%.
Stack: React, Node.js/Express, Python (AWS Lambda), Strapi, D3, Vite, Firebase, Mixpanel, Sentry, AWS.

EARLIER

CFO, Socialab (IDB-backed social incubator), Santiago 2012-2016 · Finance Officer, Qualitas of Life Foundation, NYC 2017-2019 · Engineer, Ril-Light, Chile 2010-2012

EDUCATION

New York University	M.S., Management and Systems	2019
Universidad Mayor	B.S., Industrial Engineering	2009

SKILLS

Languages: TypeScript, JavaScript, Python, SQL
Frontend: React, Next.js, React Native, component architecture and state modeling, D3, Tailwind/Ant Design, Vite
Backend: NestJS, Node.js/Express, FastAPI, PostgreSQL (+pgvector), Prisma, Redis/BullMQ, REST
AI / Agents: MCP servers, agent orchestration and task routing, RAG and semantic search, OpenAI, Gemini, Vertex AI
Infra & Observability: AWS (ECS, RDS, Lambda, Cognito), GCP/BigQuery, Docker, CI/CD, Sentry, Auth0
Testing: Jest, Vitest, Cypress, React Testing Library
